

## LOADED ENCLOSURES

When it comes to selecting an enclosure to make sure your new woofers perform the way they should, it's not always an easy choice. And, picking the wrong enclosure could make your great new subwoofer sound, well, not so great.

Bazooka® revolutionized the world of automotive subwoofers 26 years ago with the introduction of the Bass Tubes® enclosure. Now, we've done it again. We've engineered the enclosures here to maximize the subwoofer's performance, and look great doing it. All the enclosures feature vented designs. Simply put, this means that you get the MOST output out of these woofers, without sacrificing sound quality. Just to sweeten the deal, we made the enclosures look as good as they sound, too.

And, whether you're looking for a single 10 inch subwoofer or the big dual 12 inch, we have a Bazooka Loaded Enclosure that's just right for you.

The Tri-Vent Enclosure (TVB) that made our triangle subwoofers a hit has even been re-introduced, this time, using a conventional round subwoofer, but still taking full advantage of the advanced engineering that made the TVB such an impressive sub.

### ENCLOSURE FEATURES: All Models

- Factory designed and tuned for maximum performance
- Extended Low Frequency Slotted Ports
- 5 way Binding posts for easy connection
- High Quality MDF Construction
- Black Carpeted Covering
- Clean Custom look with laminated side panels
