

Screw 4 bolts (4) with washers into threaded mounting plates (5). Rotate bolts and mounting plates until bolts are against rack tubing. Then tighten all 4 bolts evenly. You will have a 1/8 inch gap between spacers (2) and mounting arm after mounting plate is tightened against the atv rack tubbing.

Tighten 6mm x 40mm bolt (1) until gap is gone and rail is tight. There will be a slight bend of the Power Rail Mounting arms.
